Leafy suburbs get more TLC

By FARREN COLLINS

● A rotten snoek might have lifted the lid on why Cape Town's leafy suburbs are cleaner than the poorer areas.

Bo-Kaap resident Trudie Broekmann moved from Tamboerskloof in the city bowl to neighbouring Bo-Kaap earlier this year.

She immediately noticed that the affluent suburb had been cleaner than the historic Malay Quarter.

She eventually wrote to the city after some rotting snoek, which had been left on the road by informal fish sellers, released an unbearable stench in the area.

It took a month of correspondence before a crew was sent out to clean Broekmann's street.

"I am shocked at the difference in the amount of rubbish on the streets. While I commend the city on their cleaning in Tamboerskloof, surely it is not acceptable that Bo-Kaap, which is a tourist attraction, [does not get the same attention]."

A senior city official, who asked not to

"We have autumn- and winter-preparedness programmes that focus on leafy areas"

be named, told The Times all city suburbs were scheduled for three cleans a year, but the number increased in "leafy" areas in the more affluent southern suburbs.

This was because leaves could clog drains which left less shady areas, including the Cape Flats, unserved for longer.

City of Cape Town councillor for social services JP Smith said, however, the recreation and parks department applied the same maintenance standards for suburbs.

"Generally, previously under-served areas may receive additional projects such as the expanded public works programme," said Smith.

But the senior city official who spoke to The Times said there was a specific programme to ensure regular service for "leafy" areas.

"We [also] have autumn- and winter-preparedness programmes that focus on leafy areas," the official said.
