

Call to keep Waterkloof risk-free

PUBLIC Works and Infrastructure portfolio committee chairperson Nolitha Ntobongwana has called on the South African Air Force to ensure ongoing functionality and safety of the Waterkloof Air Force Base as a national key point.

The committee is in Gauteng on official oversight visits to vari-

ous government entities.

The committee found during its visit that several buildings at Waterkloof, which has a high-risk classification for sinkholes due to dolomitic soil conditions, had been demolished as a result of ground movement brought on by water ingress from wet services.
