## INFRASTRUCTURE **Project Priming** Infrastructure SA preparing 34 projects to

come to market before end-2026

IRMA VENTER | CREAMER MEDIA SENIOR DEPUTY EDITOR

Infrastructure South Africa (ISA) is currently preparing and packaging 34 projects with an estimated capital value of R259-billion, says ISA acting head **Mameetse Masemola**, with these projects "hopefully coming to market" over the next 12 to 18 months.

Speaking at a media briefing in Cape Town in May, at the yearly Sustainable Infrastructure Development Symposium South Africa (SIDSSA), she noted that these projects cut across all spheres of government.

She said that feasibility studies and related business case studies had been completed on ten of the 34 projects currently being prepared, with some of these also unlocking additional fiscal support from the National Treasury.

These ten projects are valued at R93-billion and include the expansion of the Tygerberg Hospital in Cape Town, the rollout of the Dr Kenneth Kaunda District Water and Sanitation Programme in the JB Marks local municipality, and the implementation of Project uKuvusela with Transnet, valued at R9.4-billion.

Project uKuvusela aimed to create a highcapacity, cost-effective rail link between the Gqeberha port and Gauteng for the transport of cars and related automotive goods.

The Eastern Cape and Gauteng are two of the

country's main vehicle assembly nodes, with an improved railway link line to especially benefit high-volume manufacturers such as Ford, in Pretoria, and Volkswagen, in Kariega.

On the whole, ISA's main goal was to select strategic infrastructure projects and prepare and package these projects so that they were "viable and bankable" undertakings, explained Masemola.

The State agency currently oversaw a total 305 projects on an ongoing basis, with most of these in the energy (171 projects), water and sanitation (54) and transport (32) sectors.

All ISA projects must be valued at R1-billion and above and must be able to leverage private-sector involvement, blended finance, or be commercially viable on their own.

"Our work includes ensuring that projects are assisted with the multiple authorisations, permits and licences, et cetera, that are required across government," said Masemola.

"We know, for example, that one renewableenergy project requires almost 85 types of permits, licences and authorisations, whether it is from the Civil Aviation Authority, the South African National Defence Force [or] the Department of Public Works and Infrastructure."

Masemola added that projects to the value of

R13.52-billion were completed last year, while projects valued at R51.9-billion were currently under construction.

She also provided an update on the 12 priority infrastructure projects announced during SIDSSA 2024, valued at an estimated R180-billion.

She said seven of the 12 projects had been contracted already, with private-sector participation, and that they were in various stages of completion.

The 12 projects include the Rooiwal Wastewater Treatment Works (Phase 2), in Pretoria; the Amatola Water Bulk Supply Augmentation Project, the Eskom Tubatse Storage Scheme, the Port of Ngqura Liquified Natural Gas project, and the development of the Namakwa and Nkomazi special economic zones.

"The goal is clear – we must accelerate delivery, stimulate growth and turn South Africa into a construction site," Public Works and Infrastructure Minister **Dean Macpherson** said during the briefing.

"One of the biggest reforms we have made is to prioritise project preparation funding.

"Through ISA, we are ensuring publicsector projects no longer fail at the first hurdle due to weak planning, poor structuring or lack of compliance.

"Over R600-million is now being committed to prepare strategic infrastructure projects.

"That means real funding for feasibility studies, regulatory compliance, bankable designs and community consultations – they are now taking place at pace and with a hands-on approach.

"Projects are now moving from planning to procurement, and from procurement to breaking ground," said Macpherson.
