## 1. INTRODUCTION

This report presents the findings and recommendations for the Prestige Ministerial House 287 Albert Street, Waterkloof Pretoria. A site visit was conducted on the 2<sup>nd</sup> of June 2023 following a request for assistance from the Facilities Management at the Department of Public works and Infrastructure (DPWI) on the 29<sup>th</sup> of May 2023. The assistance is with respect to the inspection of existing automated swing gates installed at the Prestige Ministerial Houses. The automated gates reportedly experience frequent breakdowns hence the request to conduct inspection and come up with possible solutions and associated cost estimates.

The findings and recommendations in this investigation report only covers mechanical elements of the gate systems.

### 3. BACKGROUND

The Prestige Ministerial House mentioned above is fitted with a double automatic swing gates. This gates operate using the Centurion control systems with an actuator mounted on to the pillar and the gate for closing and opening. The gates are remotely operated either by push button or portable remote switch.

It was reported that the gate automation system in this Ministerial House is not properly functional, as a result the security personnel would sometimes operate the gates manually with the actuators disassembled. This poses challenges with respect to the operations. Mechanical engineering department is then required to investigate on the matter and present the most effective solutions. Furthermore, it was made a suggestion that the entire gate and automation system must be replaced with a different system that will be reliable and long lasting. Also, the new gate should be installed or moved closer to the guard house for maximum security and safety.

### 1. FINDINGS

The site investigation conducted for the Ministerial Houses indicates the following findings:

- **287 ALBERT STREET, WATERKLOOF**

Swing gates in this premise are poorly functional as they would sometimes operate at different speeds or one between the two gates would not operate at all. It was found that the hinges holding gates to a pillar were bent and had accumulated rust. This affects alignment of the gate and negatively impact the performance of the actuator. Also, the hinges were not lubricated or greased.

It was also found that the actuators were not properly calibrated and synchronized and this would result in gates operating differently in terms of positioning and speeds. Also, mechanical limits of the actuators are not properly adjusted and this causes the gates to overlap. To prevent the overlap, an (L) shaped bracket is installed to block the gate and keep it at the right position. This installation works against the actuator and creates deep square marks on the gate.

It was suggested that the gate should be moved a distance closer to the guard house for maximum protection and safety. Possible gates that can be installed would be a roller shutter and a sliding gate. However, it might be a challenge to make new installations at the desired location due to restrictions from walls and the surface bed.

Structural engineers where consulted in order to get a technical advice and guidance on to how to properly excavate the surface bed and the stairs in order to make new gate installations.

### 3.1. PROPOSED PROCUREMENT INSTRUCTION

- Repairs and renovations for the Prestige Ministerial House swing gates.
- Cost estimates: R65 000.00 including labour, worst case scenario, commissioning and testing along with electrical installations/connections.

### 4. RECOMMENDATIONS

As indicated in the findings, the gate automation system operates at a fair to poor condition. Due to frequent breakdowns and repairs, the technical team then analysed the entire gate system and concluded that the system must be revised. Possible gate systems were considered in order to find the best gate for the premises.

Possible gates to be installed are the sliding, swing and roller shutter gates.

- **Roller gates** – The gate is fitted with a motor and gear box on top and rolls up and down for closing and opening. The operation can be achieved electrically (automation) or by hand using chain or a lever.

Advantages:

- Requires less space
- Reliable
- Cost effective as compared to the sliding and swing gates
- Less maintenance

Disadvantages:

- Makes more noise
  - Poor in strength as compared to the sliding and swing gates
- **Sliding gates** – The gate slides sideways for opening and closing with the motor and gearbox mounted parallel to the gate for the rack and pinon to mesh. Opening and closing can be achieved either by hand or electrically.

Advantaged:

- Takes up less space when opening
- Easy to use and install
- Hard to force open thus provides maximum security

Disadvantages:

- Slow in operation as compared to roller and swing gates

**Swing gates:** The gates are fitted with actuators mounted on to the pillar and the gate for opening and closing. The gate will swing when opening and closing and can split in the middle and the two parts will swing apart from one another or can swing as a hole.

Advantages:

- Affordable
- Fast in opening and closing

Disadvantages:

- Actuators must be horizontal at all times
- Sometimes the gates would stuck halfway open/close
- Need frequent adjustments
- Affected by wind

For this Ministerial House, the swing gate system will be ruled out because of the disadvantages listed above and the roller gate cannot be possible because there is no suitable structure to hold the roller gate and the related components. It is therefore recommended that the sliding gate must be installed.

The sliding gate recommended for installation in this premise will be blocked by a surface bed and stairs depicted below:

Figure 6: Surface bed and stairs

The recommendations from the structural engineers indicated that removing the surface bed by means of excavation would not have a negative impact on the surrounding structures and that the installations can be safely conducted.

Depicted below is the type of sliding gate to be installed.

Figure 7: Sliding gate

#### General considerations for the installations

- Always take safety as a priority, additional safety equipment such as safety edges and beams for additional protection against entrapment or other mechanical risks.
- Check that enough space is available for the operation.
- Check that no pipes, electrical cables and other obstacles are in the way of the intended installation
- Fit end-stops for gate limits when closing and/or opening.

#### 5. CONCLUSION

The scope of work for this project entails the complete replacement of gates along with the actuators and other components of the gates. The appropriate gate to be installed is a sliding gate. Before conducting any installation or maintenance, the installer must take in to cognisance all the health and safety procedures in place and always use the service/installation manual provided by the supplier.

Excavation of the surface bed should be carried out under the supervision of a qualified structural engineer and upon appointment of the service provider (SP), the SP is expected to go to site to verify all site measurements to ensure a full and functional implementation of the solution provided herein complete with all necessary associated component to ensure a complete and operational installation. SP to provide final costs, measurements and specifications for departmental approval prior to commencement of works on-site.

## PA- 29: CERTIFICATION OF INDEPENDENT BID DETERMINATION

Project title:			
Bid no:		Reference no:	

### INTRODUCTION

1. This PA-29 [Certificate of Independent Bid Determination] must form part of all bids<sup>1</sup> invited.
2. Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).<sup>2</sup> Collusive bidding is a *per se* prohibition meaning that it cannot be justified under any grounds.
3. Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
  - a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.
  - b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.
4. This form (PA-29) serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
5. In order to give effect to the above, the attached Certificate of Bid Determination (PA-29) must be completed and submitted with the bid:

---

<sup>1</sup> Includes price quotations, advertised competitive bids, limited bids and proposals.

<sup>2</sup> Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
