TOOLS AND EQUIPMENT USED TO CUT DOWN AND TRIM TREES

- 1. Gather the necessary tools and equipment.** You'll need a handheld pruner and a larger lopping shears to trim branches that are small to medium-sized. For mature trees, you'll need a pole pruner to safely reach high branches and a handsaw or chainsaw to remove thick limbs. Wear eyeglasses in accordance with ANSI standards or risk your vision! You might also need a ladder.

2. Decide which branches to remove.

- Identify dead or diseased branches.
- Look for crisscrossing branches that are making contact with each other or about to. When branches rub against each other, the resulting wound makes the tree more susceptible to disease.
- Examine the tree for branches extending inward, rather than outward. These should be removed to avoid crowding, so sunlight can reach the leaves at the tree's interior.
- Stand back and look at the shape of the tree. Identify any branches that make the tree look misshapen.
- Look for branches that need to be removed to reduce the size of the tree. Limbs that are too close to the house should be removed. They can cause damage to the house when blowing in the wind as well as allow insects and animals to reach your house.
- Branches that are below head height on more mature trees should be removed. This is called "raising the canopy."
- Check for new growth along the trunk and main branches, called "water sprouts," and from the roots, called "suckers." This is known as epicormic growth and these branches are more susceptible to disease and breakage.

- 3.**
Trim starting at the bottom of the tree and move upward and from the inside and move outward. This will help you to keep a natural shape to the tree.

4. **Cut right above where the branch or new growth attaches to the trunk or main branch. This area is called the branch collar or abscission zone. Do not cut the branch collar because this is where the tree will heal and close up the wound.**

5. Use a handheld pruner to trim new growth and small branches you can reach from the ground or safely from a ladder.

6.

When removing large branches first make a cut on the underside of the branch (a foot away from the trunk) Cut 1/3 of the way through from the bottom of the branch to the top of the branch without pinching the saw. Second make a cut on the top of branch outwards from the first cut. Make the second cut all the way through. The first cut prevents the branch from tearing the trunk bark. Lastly remove the stub above the branch collar, which is where it widens before reaching the trunk. This will allow a callous to form over the wound. If you make the cut flush with the trunk, it won't be able to heal properly and will be more susceptible to disease. (Some tree like pines need to be cut back all the way to the trunk)

TOOLS AND MATERIALS

OBVIOUS/TRADITIONAL TOOLS

 6. 10-20 4in screws (to secure 2x4's)
 7. 4-8 8-10in spike nails (to help secure ladder)

What is a Cherry Picker?

What is a Cherry Picker?

A cherry picker, also known as a boom lift, man lift, hydaladder, or basket crane, is a type of elevated, hydraulic crane platform that is used to raise and lower personnel to and from elevated working surfaces. Cherry pickers are often used to give workers access to overhead cables, but they get their name from their history of picking high up fruit in orchards, like cherries.

Cherry pickers are not to be confused with order pickers, which are actually forklifts and designed for selecting items from heights inside a warehouse. Cherry pickers, classified as aerial lifts under the OSHA standard 1910.67 and cherry picker regulations, come in several different types, including truck-boom mounted picker, telescopic boom, articulated boom, and trailer mounted lift.

- – **Truck mounted boom picker.** Truck-mounted boom lifts are exactly as they sound. The body sits on a 4-wheel chassis of a truck that's fitted with a boom arm on the back. This type of cherry picker lift is one of the most transportable and makes it easy to access a variety of work locations. Forklifts are similar to the truck-mounted boom picker, since they also rest on a 4-wheel chassis and use forks to lift and lower loads and access high up materials. Cherry picker forklift training teaches how to use both boom pickers and forklifts.
- – **Telescopic boom.** Telescopic boom lifts are known for their great reach power. They are used on a variety of situations for accessing items at incredible heights that other machines can't, like tall trees, power lines, and even stalled roller coasters.
- – **Articulated boom.** Articulated booms are made with a jointed "arm" which means that they can reach up and over structures to access hard-to-reach areas. They are one of the most flexible and versatile types of cherry pickers.
- – **Trailer-mounted lift.** The trailer-mounted cherry picker is made up of a boom arm that rests on top of wheels for moving and small arms for balance. It is very portable and can be brought in to work areas where typical machines can't.

• **Where Are Cherry Pickers Used?**

- Now that you know exactly what a cherry picker is, it's important to know what kinds of job they are used for. Cherry pickers are used on a variety of worksites, but for the primary purpose of reaching otherwise inaccessible areas. Construction workers use cherry pickers to access buildings to paint, install or maintain windows, work on electrical systems, install signage, install and maintain lighting, work on trees, and much more. They have made many types of projects possible and are incredibly useful machines. However, if you don't know how to use a cherry picker properly, there are some serious risk involved. Injuries and fatalities caused by cherry picker lift accidents are not uncommon on worksites across the country, and it is essential for workers to receive adequate cherry picker certification training and to follow all cherry picker regulations to protect their life.

- Additionally, you may want to know where forklifts are used. Forklifts are used on many construction sites, and in warehouses. They are used to lift, raise, stack, and lower loads onto shelving racks, as well as access materials high up in a warehouse. Cherry picker forklift training teaches operators how to operate cherry pickers outdoors on construction sites and forklifts indoors and out.

- **Why is Cherry Picker Training Important?**

- In 2011 alone, cherry pickers were responsible for the deaths of 39 workers. 66 more fatalities were caused by truck-mounted lifts, and cherry pickers were listed as the secondary cause of 34 other deaths.
- Other types of boom lifts can additional deaths. Boom lifts are responsible for seven out of ten deaths, while scissor lifts account for more than 25 percent of aerial lift fatalities. These figures do not include fatalities from electrocution while using a lift vehicle

The most **common causes of cherry picker deaths and injuries** include:

- – Falling from lift
- – Electrocution
- – Lift tips over
- These unfortunate accidents start with operators not being aware of what is a cherry picker and how to use a cherry picker properly. Have you guessed what is the key to preventing these accidents? Yep, it's cherry picker training.
- Cherry picker training teaches workers everything they need to know to operate all types of cherry pickers, how to recognize and avoid hazards, and how to be compliant with all cherry picker regulations. It prevents injuries and fatalities, and it keeps fines and legalities out of the workplace.
- Forklifts also cause deaths and injuries every year on worksites. They cause about 85 fatalities every year, most of which can be boiled down to operator error. Cherry picker forklift training teaches workers how to operate not only cherry pickers, but also forklifts in warehouses and outside to be as safe as possible on all types of equipment.

Cherry Picker Regulations to Prevent Accidents

Ensure all workers receive proper **cherry picker training** to prevent accidents and avoid costly fines. For operators, the first step is knowing what a cherry picker is, its unique characteristics, and how to operate a cherry picker lift properly. It's also essential to make sure training is compliant with OSHA requirements for using an aerial lift safely, which include:

- – **Do not exceed load or weight limits**
- – **Do not sit or climb on guardrails**
- – **Don't modify an aerial lift**, without consulting the manufacturer in writing
- – **Maintain aerial lifts properly** (this applies to rented lifts in particular)
- – **Perform daily inspections** of safety devices and lift controls
- – **Always wear a seat belt and fall protection equipment**, including a full body harness and lanyard, if working on an elevated platform
- – **Do not drive an aerial lift with the lift extended**
- – **Set the brakes and outriggers**
- – **Use wheel chocks on sloped ground**

How to Use a Cherry Picker Safely In a document published on the Electronic Library of Construction Occupational Safety and Health (ELCOSH), the **Center for Construction Research and Training** made the following recommendations for how to use a cherry picker safely:

- – **Avoid power lines.** Keep non-electrical workers at least 10 feet away from live overhead power lines. This **video** shows what can happen when a crane is not even touching a power line.
- – **Rotate and move slowly.** Sudden jerks of the bucket can cause direct contact with power lines and should be avoided. In fact, sudden jerks of the bucket or platform are not recommended under any circumstances, as this **video** shows.
- – **Wear protective clothing.** Electrical workers who are working on or near live power lines should use insulated tools and wear rubber gloves, rubber sleeves, voltage-rated shoes; Class E (formerly Class B) insulated hard hats, and whatever other personal safety equipment is needed. If boom buckets cannot be insulated, then the aerial lift should be grounded.
- – **Safely remove electrocution hazards.** Effort should be made to either insulate or de-energize live power lines.
- – **Remain compliant with safety protocols.** Boom buckets should be regularly tested to ensure the insulation is up to regulation specifications.
- – **Make sure you are on stable ground.** All cherry pickers must be placed on even, stable terrain to prevent tip-overs. Use outriggers when needed, and use brakes and wheel chocks when the lift is on an incline.
- – **Use fall protection.** When operators are working on cherry pickers, they must use full body harnesses and lanyards to prevent them from falling and being injured or killed.
- – **Understand what a cherry picker is and receive specialty cherry picker training.**

BACK HOE OR T.L.B USED TO DEROOT A TREE.

REMOVAL OF TREES

Tree roots can sometimes be unsightly in our yards, causing us to want to dig up them up. Other times, they can become dangerous, such as when a tree is growing too close to a foundation of a house or is damaging underground pipes. However, digging up tree roots isn't as simple as using a shovel to dig a hole. Digging up too many roots or the wrong roots can actually kill the tree, which may cause you to remove the tree entirely. Luckily, if you follow the correct procedures, take the right precautions, and use the right techniques, you can safely dig up a tree's roots without killing the tree.

1. Trace the root that you want to cut back to the tree. Cutting the root too close to the tree can cause structural instability and can cause the tree to fall over.^[1] Measure the tree trunk's diameter with a tape measure and multiply it by 8. This number is the closest distance from the tree that you can cut the root.^[2]
- For example if your tree has a diameter of 2 feet (60.96 cm) you shouldn't cut the root closer than 16 feet (4.8 meters) from the tree itself

2. **Avoid choosing the largest roots.** Larger roots are called structural roots and are important in keeping the tree in place. These roots begin at the base of the tree and flare out. Do not cut larger roots 6 inches (152.4mm) to one foot (304.8mm) from the trunk for every inch in diameter that the tree is. You can measure the diameter of the tree by wrapping a tape measure around the tree at chest height.^[3]

 - For instance, you shouldn't cut a tree that's 16-inches (406.4mm) in diameter 8 feet (2.4384 meters) to 16 feet (4.8768 meters) from the trunk

wikiHow to Dig up Tree Roots

3. **Don't remove more than 20% of your tree's roots.** When removing large portions of the tree's roots, make sure to wait up to three years before cutting more roots. Removing over 20% of your tree's roots will seriously harm it and could kill it.^[4] If you plan on cutting a large portion of the roots from a tree, consider completely **removing the tree** instead.

4. **Consult an arborist if you're unsure of yourself.** If you don't feel confident cutting a tree's roots, then you should seek professional guidance before doing so. Arborists from a local cooperative extension will sometimes provide tree root pruning services for a fee. If you'd rather do it yourself, see if you can have them come in for a smaller consultation fee.^[5]

- Arborists will have the equipment and knowledge to safely remove the tree roots for you

DIGGING UP THE ROOTS

1. **Dig a hole in the area where you want to remove the roots.** Measure a safe distance away from the tree before digging your hole. If the roots that you want to remove are underground, you'll need to reveal them with a shovel. Dig a hole around the tree where you want to remove the roots using a trenching or a digging shovel. Do your best not to disrupt or break the tree's roots while you do this.^[6]

2. **Draw a line where you want to remove the root.** Once you've located the root you want to remove, use spray paint, colored chalk, or a thick marker to mark the spot where you'll cut the tree root. Marking the root will help guide you and prevent you from cutting the root too close to the tree. Simply mark the root with a line that will help guide where to cut with the saw.

3. **Dig around the root with a spade.** Dig around the root with a smaller spade, making sure to dig under the root as well. Leave space around the root, so it's easier to cut it. Completely reveal the area where you'll cut with your shovel and give yourself enough space to make cuts.

1. **Cut the root where you marked.** For smaller roots, like those that are less than an inch (2.54 cm) in diameter, you can use regular gardening shears or gardening scissors to cut the root.^[7] If you are cutting a larger root, you'll need to use a special tool -- a root saw or a mechanical reciprocating saw. You can purchase these saws at home and gardening stores or online.^[8] Some store locations will allow you to rent reciprocating saws for a daily rate
2. **Grab the cut end and pull the root towards you.** Grab the loose end of the root and pull it towards you until it tears free from the ground. If the root is embedded deeply into the ground, you may need to dig up more soil around the root. Once you're done, discard the root, and continue doing this to the other roots that you're cutting.

3. **Install a barrier.** To keep the root from growing back, put in a barrier under the soil before you fill in the hole. Use a heavy duty plastic tree root barrier, and install it 30-inches (76 centimeters) below the surface of the soil.^[9] You can purchase a plastic tree root barrier at most lawn and garden centers.

4. **Fill in the hole.** Fill the hole you've made with mulch or fertilizer purchased from the store. As an alternative to mulch, you can also fill your trench with grass seeds or sod if you want grass in the area.^[10] Take your cut tree's roots and dispose of them.

Tree Felling Risk Assessment

The following key lessons may help save your life.

Initial site survey;

Wherever possible, assess jobs in advance. This allows for correct selection of equipment, allocation of staff and prior knowledge of hazards. It also allows an experienced site surveyor to provide guidance and work methodology to the people carrying out the work.

Risk assessment/emergency planning:

The assessment should take account of the hazards that are relevant and specific to the given site, task and tree. It is not just an exercise on paper; if you cannot control risks to acceptable levels, work on that task must not proceed until suitable arrangements are in place. Emergency contingency plans (first aid, emergency contact numbers, Accident and Emergency number, site location etc) must be made in advance.

Work planning:

All information, as well as the actual undertaking of the job, must be planned, agreed and understood by all the team.

Felling cuts:

Effective control of the fell is maintained by an appropriate combination of the directional or sink cut, hinge and main felling or back cut. Felling cuts must be appropriate to the tree size and form and consistently accurate.

Felling aids (breaker bars, wedges etc):

These must be appropriate to the tree size and form. The need for felling aids must be identified in advance; they must be appropriate and readily available to the person undertaking the fell.

Control lines, pull ropes, anchor ropes, winches etc:

If these types of system are to be used there should be clear understanding of their intended purpose and suitability for the task, eg is it:

- An assisted fell?
- An anchor or back up?
- A felling aid?
- A winching operation? or
- A combination of tasks?

Avoid:

'free hand' pulling or non-anchored applications. There is a high risk that if the person pulling the rope sways or rocks the tree during the felling operation, the main felling cut at the rear of the tree will open and close with the risk that the chainsaw operator could compromise the integrity of the hinge.

Do not:

over tension lines, as this may place considerable tension on the rear of the tree which may cause the hinge to sever prematurely, the tree to split, and injury to the chainsaw operator.

Avoid:

making the main felling or back cut while your workmate is simultaneously applying tension to the line. As well as the above risks, the chainsaw operator cannot safely place the back cut and monitor the action of his colleague operating the line. In the majority of cases the tree feller should be able to form the back cut, leave a hinge of appropriate size, step into a safe area, and then issue an agreed signal for the person on the lines to start operation.

Escape routes:

Plan escape routes in advance – they must be clear of obstructions. If control is lost over the fell, use the escape route and try not to turn your back on the falling tree. Remember, accidents often happen because unforeseen or remote risks actually materialise. Consider the possibility that the tree may fall towards your intended escape routes. Have you got enough back up to ensure that the tree will fall in the intended direction? Is there enough space to enable you to take evasive action if the unforeseen does occur?

Staff competency and experience:

Staff should have the necessary training, experience and competency certificate relevant to the task they are undertaking. Remember that people holding only CS 30/31 with little additional experience can quickly find themselves in situations outside their experience and skill base. This is particularly true when faced with larger and awkward fells and when faced with the unique hazards associated with arboricultural operations in gardens and the built

22.7. The Additional Services will be valued at the rates in the Pricing Data.

23. IDENTIFIED PROJECTS

23.1. The Service Provider shall inform the Employer of any instructions that are deemed to be Identified Projects prior to such instructions being executed.

23.2. The Employer is not obliged to engage the services of the Service Provider on Identified Projects. The Employer may, by itself, through another service provider or through the Service Provider effect the services/works under Identified Projects.

23.3. Identified Projects will only be executed by the Service Provider after receipt by him of a written instruction from the Service Manager.

23.4. If no prior written authorisation, as required in 23.3 above, has been obtained, the Employer shall not reimburse the Service Provider for the Identified Projects so executed, and the Service Provider agrees that it shall not have a claim for payment for such Identified Projects.

23.5. In respect of the Identified Projects, the written instruction referred to in 23.3 shall:

- (a) describe the services/works required to be executed by the Service Provider under the Identified Project;
- (b) state the due commencement and completion dates of the relevant Identified Project;
- (c) state the total cost of the relevant Identified Project as agreed to between the Parties; and
- (d) any additional requirements, conditions of contract and/or restrictions, other than those already stated in the Contract, that will be applicable.

23.6. Within 14 days of receipt of the written instruction referred to in 23.5, the Service Provider shall furnish the Employer with a realistic programme and a cash flow for the relevant Identified Project as required in 13.

- 23.7 Where an Identified Project comprises services/works that are of the same or similar character executed under the same or similar conditions as those to which the rates in the Pricing Data apply, it shall be valued at such rates.
- 23.8 Where an Identified Project comprises services/works that are not of the same or similar character executed under the same or similar conditions as those to which the rates in the Pricing Data apply, it shall be valued at market related rates to be agreed to in writing between the Employer and the Service Provider and in advance of executing the Identified Project. Failing agreement, the rates applicable shall be as determined by the Employer.
- 23.9 If the Service Provider fails to complete the Identified Project by the completion date specified in the written instruction referred to in 23.3, then the Service Provider will be liable for a penalty, at the rate stated in the Contract Data, for every day that lapses from the due completion date of the relevant Identified Project to the date of the actual completion of such Identified Project.
- 23.10 If the Identified Projects are delayed by variations, omissions, additions, substitutions or organised work stoppages by any workman not due to any action on the part of the Service Provider, exceptionally inclement weather, any substantial increase in provisional quantities or any other cause beyond the Service Provider's control, including delays caused by the Employer, then the Service Provider shall be entitled to apply in writing within 21 days of the cause of delay arising to the Service Manager for extension of the due completion date of the relevant Identified Project stating the cause of delay and period of extension applied for.
- 23.11 If during the period for completion of the Identified Project or any extension thereof abnormal rainfall or wet conditions occur, the formula below shall be used to calculate separately the delay for each calendar month or part thereof. It shall be calculated each month during the period referred to herein above, or until the issue date of the certificate of completion for the relevant Identified Project, whichever is the shorter period. The delay calculated for a given month shall be used to determine the interim extension of time granted for the month. At the end of the applicable period referred to above, the aggregate of the monthly delays will be taken into account for the final determination of the total extension of time for the Contract:

$$V = \frac{(Nw - Nn) + (Rw - Rn)}{X}$$

V = Delays due to rain in calendar days in respect of the calendar month under consideration.

Nw = Actual number of days during the calendar month on which a rainfall of Y mm or more per day has been recorded

Rw = Actual rainfall in mm for the calendar month under consideration.

Nn = Average number of days in the relevant calendar month (as derived from existing rainfall records provided in the project specifications) on which a rainfall of Y mm or more per day has been recorded.

Rn = Average rainfall in mm for the calendar month, as derived from the rainfall records supplied in the project specifications.

X = 20, unless otherwise provided in the project specifications.

Y = 10, unless otherwise provided in the project specifications.

The total delay that will be taken into account for the determination of the total extension of time for the Contract shall be the algebraic sum of the monthly totals for the period under consideration. But if the grand total is negative, the time for completion shall not be reduced on account of abnormal rainfall. The total extension of time for any calendar month shall not exceed (Nc – Nn) calendar days, where Nc = number of days calendar days in the month under consideration

The factor (Nw – Nn) shall be considered to represent a fair allowance for variations from the average number of days during which rainfall equals or exceeds Y mm per day.

The factor $(Rw - Rn) + X$ shall be considered to represent a fair allowance for variations from the average for the number of days during which rainfall does not equal or exceed Y mm per day, but when wet conditions prevent or disrupt work.

This formula does not take into account any flood damage, which could cause further or concurrent delays and which should be treated separately in so far as extension of time is concerned.

Accurate rain gaugings shall be taken at a suitable point on the site daily at 08:00 unless otherwise agreed to by the Service Manager, and the Contractor shall, at his own expense, take all necessary precautions to ensure that the rain gauges cannot be interfered with by unauthorized persons.

Information regarding existing rainfall records, if available from a suitable rainfall station near the site, will be supplied in the project specifications, together with calculations of rain delays for previous years in accordance with the above formula. The average of these delays will be regarded as normal rain delays which the Contractor shall accommodate in his programme, and for which no extension of time will be considered.

- 23.12 Upon receipt of such written application, referred to in 23.10, the Employer may in writing extend the due completion date of the relevant Identified Project by a period to be determined by the Employer or may refuse to extend the due completion date of the relevant Identified Project. The due completion date of an Identified Project may not be extended beyond the end of the Contract Period stated in the Contract Data.
- 23.13 Any decision given by the Employer, in terms of 23.12, shall be final and binding on the Parties.
- 23.14 Should the Service Provider fail to apply in writing for an extension of the due completion date of the relevant Identified Projects within the 21 days referred to in 23.10, or should the Employer not grant an extension of the due completion date then the due completion date stipulated in the relevant written instruction referred to in 23.5 shall not be extended nor the Service Provider exonerated from liability to pay the penalty stipulated in 23.9 or from specific performance of the service/works within the period in the relevant written instruction.

24. SUSPENSION OF THE SERVICES

- 24.1 The Service Provider shall, on the written order of the Service Manager, suspend the provision of the Services or any part thereof for such time or times and in such manner as the Service Manager shall order and shall, during such suspension, properly protect the Services so far as is necessary.
- 24.2 If the Service Provider is instructed in writing by the Service Manager to suspend any or all of the Services, the Service Provider shall re-schedule the relevant Services. For the duration of such suspension all penalties applicable to that Service will be waived. Should the Service Provider suffer any additional costs resulting from such suspension, the Service Provider shall be entitled to make a claim therefor provided that the Service Provider shall prove his claim and that he has taken all reasonable steps to mitigate the additional costs.
- 24.3 If the Service Provider is unable to render any of the Services for any reason other than an instruction by the Employer to suspend the Services in terms of clause 24.1, the Employer shall not be liable for any claim of whatever nature, including a claim for costs, by the Service Provider.

26.12 In assessing the quality of the work presented by the Service Provider, the Employer may enlist the assistance of third persons. In assessing the work the third person shall act reasonably. The selection of such third persons shall be in the absolute discretion of the Employer and the Service Provider shall abide by such selection.

26.13 Any and all extra costs incurred by the Service Provider, resulting from the Service Provider having to address and/or rectify queries arising from a claim submitted in respect of work done, shall be for the account of the Service Provider.
