

VACCINATE TO SAVE SOUTH AFRICA

TOGETHER WE CAN BEAT CORONAVIRUS

MAN-TO-MAN VACCINE TALK

COVID-19 AND SEX

Can COVID-19 vaccine cause erectile dysfunction?
NO.

COVID-19 vaccines do not cause erectile dysfunction or infertility. On the other hand, getting infected with COVID-19 can:

- cause erectile dysfunction and infertility in men.
- increase your risk of developing erectile dysfunction by nearly six times.

WHY MEN DIE THE MOST?

More (older) men than women die of COVID-19 infection because:

- Men are biologically more susceptible to COVID-19.
- Men may not seek medical help soon enough.
- Fewer men than women are getting vaccinated.

Let us encourage our fellow brothers and friends to get the jab so that we can keep ourselves and our loved ones safe.

HOW TO VACCINATE?

If you are 12 years or older, do not wait any longer! Go and get vaccinated at a site near you. You do not even have to wait for an SMS telling you when and where to go.

- Bring your ID, passport, asylum or refugee number.
- Any questions? Call 0800 029 999. We are here for you.

MYTHS

Myth: COVID-19 vaccines kill.

Myth: You can get COVID-19 from the vaccine.

Myth: I am not at risk for severe complications of COVID-19, so I do not need the vaccine.

Myth: The vaccine will alter my DNA.

Myth: The vaccines are the mark of the beast – 666.

REAL FACTS

South Africa has passed the 22 million milestone of vaccinations administered.

No vaccine-related deaths have been found.

Vaccines reduce the risk of serious illness, hospitalisation and death related to COVID-19.

No! You cannot get COVID-19 from the vaccine because it does not contain the virus.

Vaccines reduce your risk of severe disease, but you can still contract the disease and spread it to others, so it is important to get vaccinated.

Vaccines do not alter your DNA.

Vaccines are based on the best science and have no connection with any religious or spiritual matters.
